

Dual Tower Heat Regenerative Desiccant Air Dryers - External Blower Purge 100 to 6000 SCFM

Altec AIR's HBP Series Heat Regenerative Desiccant Air Dryers also use heated air to regenerate the off-line tower. Additionally, a high-efficiency packaged blower assembly directs heated atmospheric air counter current through the desiccant bed, removing the water vapor collected from the previous drying cycle. Dew point spikes or heat bumps are mitigated by enabling the auxiliary cooling / stripping feature that uses a small percentage of dry process air (1.7%)
